# Annual Coal Report 2018

October 2019

*Independent Statistics & Analysis*

U.S. Department of Energy

[www.eia.gov](http://www.eia.gov)

Washington, DC 20585

This report was prepared by the U.S. Energy Information Administration (EIA), the statistical and analytical agency within the U.S. Department of Energy. By law, EIA's data, analyses, and forecasts are independent of approval by any other officer or employee of the United States Government. The views in this report therefore should not be construed as representing those of the U.S. Department of Energy or other federal agencies.

## Contacts

This publication was prepared by the U.S. Energy Information Administration (EIA). You can request general information about the data in this report by emailing [InfoCoal@eia.gov](mailto:InfoCoal@eia.gov).

Direct all other questions on coal statistics to the Office of Stakeholder Outreach and Communications at (202) 586-8800 or email [infoctr@eia.gov](mailto:infoctr@eia.gov).

## Preface

The *Annual Coal Report* (ACR) provides information about U.S. coal production, number of mines, productive capacity, recoverable reserves, employment, productivity, consumption, stocks, and prices to a wide audience, including Congress, federal and state agencies, the coal industry, and the general public. EIA publishes this report to fulfill data collection and dissemination responsibilities under the Federal Energy Administration Act of 1974 (Public Law 93-275), as amended.

Coal production, number of mines, employment, and productivity are based on the U.S. Department of Labor's Mine Safety and Health Administration's Form 7000-2, *Quarterly Mine Employment and Coal Production Report*. Productive capacity, recoverable reserves, and prices are based on EIA's Form EIA-7A, *Annual Survey of Coal Production and Preparation*. Consumption and stocks are based on EIA survey forms.

This report is EIA's 43nd annual report on the coal industry, and it continues the series formerly included in the *Minerals Yearbook*, which the U.S. Bureau of Mines previously published. All data for 2018 and previous years are final.

The Office of Energy Production, Conversion, & Delivery acknowledges the cooperation of the respondents in supplying the information published in the *Annual Coal Report*, and we appreciate the valuable assistance of state coal mining agencies and the U.S. Department of Labor, Mine Safety and Health Administration.

## Contents

Contacts .....	iii
Preface .....	iv
Executive Summary .....	viii
Coal Production .....	1
Productive Capacity .....	18
Recoverable Reserves .....	23
Employment .....	29
Productivity .....	36
Domestic Markets .....	46
Average Mine Sales Price .....	52
Average Consumer Prices .....	63
Imports and Exports .....	66

## Tables

ES-1. Coal production, 1949–2018.....	xi
ES-2. Coal mining productivity, 1949–2018 .....	xii
ES-3. Coke overview, 1949–2018.....	xiv
ES-4. Nominal coal prices, 1949–2018.....	xvi
ES-5. Average price of U.S. exports and imports, 2011–2018 .....	xviii
1. Coal production and number of mines by state and mine type, 2018 and 2017 .....	2
2. Coal production and number of mines by state, county, and mine type, 2018.....	5
3. Underground coal production by state and mining method, 2018.....	9
3.1 Surface coal production by state and mining method, 2018 .....	10
4. Coal production by coalbed thickness and mine type, 2018.....	11
5. Coal production and coalbed thickness by major coalbeds and mine type, 2018 .....	12
6. Coal production and number of mines by state and coal rank, 2018 .....	13
7. Coal production by state, mine type, and union status, 2018 .....	14
8. Coal disposition by state, 2018 .....	15
9. Major U.S. coal mines, 2018.....	16
10. Major U.S. coal producers, 2018.....	17
11. Productive capacity of coal mines by state, 2018 and 2017 .....	19
12. Capacity utilization of coal mines by state, 2018 and 2017 .....	20
13. Productive capacity and capacity utilization of underground coal mines by state and mining method, 2018 .....	21
13.1 Productive capacity and capacity utilization of surface coal mines by state and mining method, 2018 .....	22
14. Recoverable coal reserves at producing mines by state, 2018 and 2017 .....	24
15. Recoverable coal reserves at producing mines, estimated recoverable reserves, and demonstrated reserve base by mining method, 2018 .....	25
16. Recoverable coal reserves at producing underground coal mines by state and mining method, 2018 .....	26
16.1 Recoverable coal reserves at producing surface coal mines by state and mining method, 2018 .....	27
17. Recoverable coal reserves at producing U.S. mines by mine production range and mine type, 2018 .....	28
18. Average number of employees by state and mine type, 2018 and 2017 .....	30
18.1. Average number of employees and number of mines by state and coal type, 2018 .....	31
19. Average number of employees at underground and surface mines by state and mine production range, 2018 .....	32
20. Average number of employees at underground and surface mines by state and union status, 2018 .....	35
21. Coal productivity by state and mine type, 2018 and 2017 .....	37
22. Underground coal mining productivity by state and mining method, 2018.....	40
22.1 Surface coal mining productivity by state and mining method, 2018 .....	41
23. Coal mining productivity by state, mine type, and mine production range, 2018 .....	42
24. Coal mining productivity by state, mine type, and union status, 2018.....	45
25. Intentionally left blank .....	47

26. U.S. coal consumption by end-use sector, census division, and state, 2018 and 2017 .....	48
27. Year-end coal stocks by sector, census division, and state, 2018 and 2017 .....	50
28. Average sales price of coal by state and mine type, 2018 and 2017 .....	53
29. Average sales price of coal by state and underground mining method, 2018.....	54
29.1 Average sales price of coal by state and surface mining method, 2018.....	55
30. Average sales price of coal by state, county, and number of mines, 2018.....	56
31. Average sales price of coal by state and coal rank, 2018.....	59
32. Average sales price of coal by mine production range and mine type, 2018 .....	60
33. Average sales price of U.S. coal by state and disposition, 2018 .....	61
33.1. Average sales price of U.S. coal by use and disposition, 2014–2018.....	62
34. Average price of coal delivered to end-use sector by census division and state, 2018 and 2017 .....	64
35. Coal imports by country of origin, 2000–2018.....	67
36. Coal exports by country of destination, 1960–2018.....	68

## Executive Summary

### Publication changes

In this issue of the *Annual Coal Report* (ACR), EIA has added five new tables and revised six tables.

Table ES-5, which presents the average export and import prices of metallurgical coal, non-metallurgical coal, and coke, was expanded to include 2001–2010 data.

Tables 3, 13, 16, 22, and 29 present production, productive capacity and capacity utilization, recoverable reserves, productivity, and average sales price by state and mining method for underground mines. Previously, all data were allocated to the predominant mining method reported by each mine. We revised the methodology to allocate data based on the share of production reported for each mining method.

Tables 3.1, 13.1, 16.1, 22.1, and 29.1 are new tables presenting production, productive capacity and capacity utilization, recoverable reserves, productivity, and average sales price by state and mining method for surface mines.

### Production

In 2018, U.S. coal production decreased 2.4% to 756.2 million short tons (MMst) from 2017 levels, while the number of producing mines also decreased to 679 mines from 680 mines in 2017. Coal production in basins east of the Mississippi river increased 2.0% but was more than offset by production declines in western basins.

The Appalachian region's coal production in 2018 was 200,177 MMst, an increase of 1.2% from 2017. West Virginia's production increased 2.8% to 95.4 MMst, Pennsylvania's production increased 1.6% to 49.9 MMst, and Eastern Kentucky's production decreased 7.0% to 16.9 MMst.

Coal production in the Interior region was 136.9 MMst, a decrease of 5.7% from 2017 levels. Production in Illinois increased 2.8% to 49.6 MMst, production in Indiana increased 9.9% to 34.6 MMst, and production in Western Kentucky decreased 4.0% to 22.7 MMst. Production in the rest of the Interior region decreased 28.2% to 30.1 MMst, lead by a production decrease in Texas of 31.8% to 24.8 MMst.

Coal production in the Western region in 2018 decreased 2.9% to 418.3 MMst. Production in Wyoming, the largest coal-producing state in the region, decreased by 3.9% to 304.2 MMst. Other large producing states in the basin include Montana, where production increased by 9.6% to 38.6 MMst; Colorado, where production decreased by 6.8% to 14.0 MMst; and Utah, where production decreased by 4.9% to 13.6 MMst.

Disposition of coal during 2018 amounted to 755.9 MMst, of which 676.5 MMst was marketed as thermal coal, and 79.3 MMst was marketed as metallurgical coal. Of the metallurgical coal dispositions, 61.5 MMst was exported and 17.8 MMst was sold to domestic customers.

### Productive capacity

Productive capacity is the maximum amount of coal that can be produced annually as reported by mining companies. In 2018, the collective productive capacity of U.S. coal mines decreased 3.6% to 1,020.5 MMst. Major producing states that reported a decrease in productive capacity include Texas (-29.7% to 25.8 MMst), West Virginia (-6.9% to 121.0 MMst), Eastern Kentucky (-9.7% to 25.3 MMst), Virginia (-5.7% to 16.5 MMst), and Wyoming (-2.9% to 436.0 MMst).

The overall capacity utilization across all mines increased to 73.9% in 2018 from 73.0% in 2017. Capacity utilization is measured as the ratio of annual production to the annual productive capacity of mines.

### Recoverable reserves

Total U.S. recoverable coal reserves that are technologically and economically feasible to extract as reported by producers fell to 15,216 MMst at the end of 2018 from 16,102 MMst at the end of 2017. Large producing states that reported an increase in recoverable reserves include Illinois, Indiana, Montana, and Utah.

### Employment

The average number of employees at U.S. coal mines in 2018 increased by 532 from 2017 to 53,583 employees. The average number of employees at underground mines increased by 525 employees, and average employment at surface mines decreased by 32 employees. West Virginia, Alabama, and Montana had the largest increases in the average number of employees in 2018, increasing by 740 employees (5.6%), 304 employees (11.7%), and 165 employees (14.4%), respectively.

Total U.S. productivity as measured by average production per employee hour decreased by 4.8% to 6.23 short tons per employee hour. Productivity decreased by 3.1% in the Appalachian region to 2.85 tons per employee hour and by 3.2% in the Powder River Basin to 27.6 tons per employee hour.

### Consumption

U.S. coal consumption in 2018 was 688.1 MMst, a decline of 4.0% from 2018. Coal consumption in the electric power sector decreased by 27.8 MMst to 637.2 MMst. Coal consumption in the industrial, coke, and commercial and institutional sectors was 50.9 MMst in 2018, a 1.9% decrease from the 2017 level.

### Exports

Exports increased by 18.7 MMst in 2018 to 115.6 MMst. Europe was the largest destination of U.S. exports, amounting to 43.8 MMst. Steam coal exports accounted for 54.1 MMst (47%) of the total, and metallurgical coal accounted for 61.5 MMst (53%).

### Stocks

U.S. coal stocks in 2018 ended at 130.5 MMst, 21.9% lower than at the same time in 2017. Stocks in the electric power sector declined by 34.3 MMst to 103.5 MMst at the end of 2018. Coal stocks held by the other industrial, coke, and commercial sectors, as well as producers and distributors, decreased by 2.3 MMst to 27.0 MMst at the end of 2018 compared with the end of 2017.

### Sales price

The total average sales price of coal from U.S. mines in 2018 increased by 6.7% from 2017 levels to \$35.99 per short ton. The average sales price of thermal coal in 2018 increased by 1.8% from 2017 levels to \$27.02 per short ton, but the average sales price of metallurgical coal in 2018 increased 8.4% from 2017 levels to \$144.00 per short ton. The average sales price of coal from surface mines and underground mines increased by 4.5% and 6.0%, respectively, to \$21.90 and \$60.38 per short ton. The average sales prices of coal by rank are as follows:

- Average sales price of bituminous coal was \$59.43 per short ton in 2018, a 6.9% increase from the 2017 level
- Average sales price of subbituminous coal was \$13.64 per short ton in 2018, a 4.5% decrease from the 2017 level
- Average sales price of lignite coal was \$20.21 per short ton in 2018, a 3.6% increase from the 2017 level
- Average sales price of anthracite coal was \$99.97 per short ton in 2018, a 7.3% increase from the 2017 level

**Table ES1. Coal Production, 1949-2018**

(short tons)

Year	Rank		Mining Method			Location		Total <sup>1</sup>	
	Bituminous Coal <sup>1</sup>	Subbituminous Coal	Lignite	Anthracite <sup>1</sup>	Underground	Surface <sup>1</sup>	East of Mississippi River <sup>1</sup>	West of Mississippi River <sup>1</sup>	
1949	437,868,000	-	-	42,702,000	358,854,000	121,716,000	444,199,000	36,371,000	480,570,000

NA=Not available.

1 Data through 1973 for bituminous coal, subbituminous coal, and lignite, and data through 1978 for anthracite, were originally reported in short tons per employee day these data were converted to short tons per employee hour by assuming an eight-hour day. Through 1997, other data were calculated by dividing total production by total labor hours worked by all mine employees except office workers; beginning in 1998, the calculation also includes office workers.

2 Beginning in 2001, includes a small amount of refuse recovery.

3 Through 1978, data for anthracite are not available by mining method, but are included in 'Total'.

Note: Web Page: For related information, see <http://www.eia.gov/coal/>.

(s)=Less than 0.05 million short tons.

<sup>1</sup> Net imports equal imports minus exports. Minus sign indicates exports are greater than imports.

<sup>2</sup> Producer and distributor stocks at end of year. A negative value indicates a decrease in stocks; a positive value indicates an increase.

<sup>3</sup> 'Consumption' is calculated as the sum of production and imports minus exports and stock change.

Notes: Totals may not equal sum of components because of independent rounding.

2018	59.43	13.64	20.21	99.97	35.99

\* = Through 1978, subbituminous coal is included in 'Bituminous Coal'.

1 Because of withholding to protect company confidentiality, lignite prices exclude Texas for 1955- 1977 and Montana for 1974 1978. As a result, lignite prices for 1974-1977 are for North Dakota only.

2 See 'Nominal Dollars' in Glossary.

Notes: Prices are free-on-board (F.O.B.) rail/barge prices, which are the F.O.B. prices of coal at the point of first sale, excluding freight or shipping and insurance costs. Prices are for open market and captive coal sales; see 'Captive Coal,' 'Free on Board (F.O.B.),' and 'Open Market Coal' in Glossary.

Notes: Exports: Average price is based on the free alongside ship (f.a.s.) value. Imports: Average price is based on the customs import value. Customs import value is the price paid for merchandise when sold for exportation to the United States, excluding U.S. import duties, freight, insurance, and other charges incurred in bringing the merchandise to the United States. Total may not equal sum of components because of independent rounding.

Sources: Exports: U.S. Department of Commerce, Bureau of the Census, 'Monthly Report EM 545'; and Imports: U.S. Department of Commerce, Bureau of the Census, 'Monthly Report IM 145.'

- = No data reported.

NA = Not Available.

\* Includes mines with production of less than 25,000 short tons, which are not required to provide data, and refuse recovery.

1 The coalbed ID number is a unique code assigned by EIA to each correlated coalbed or to coal-bearing geologic formations, coal groups, or coal zones. See Coalbed name discussion in note below.

2 Average thickness is the bed thickness weighted by bed production.

Notes: This table lists the top 25 producing coalbeds. The category 'Other Coalbeds' includes all coalbeds from which less than 4.0 million short tons were produced during the year. In some regions, coalbeds are characteristically discontinuous or uncorrelatable from one location to another, and production is identified by the geological formations, coal groups, or coal zones of the native rock where the coalbeds occur. These types of coalbeds are found primarily in the Rocky Mountain States and even in the Gulf Coast lignite belt. Coalbeds of these types are also included in 'Other Coalbeds,' even though production may exceed 4.0 million short tons. Totals may not equal sum of components due to independent rounding. The coalbed name given is the name most commonly used in the State having the greatest production from that coalbed. The States having greatest production for each coalbed are Wyoming (coalbed codes 1495, 1699, and 1701); West Virginia (coalbed codes 212, 84, 111, 168, 103, 71); Illinois (coalbed code 484); Indiana (coalbed code 489); Pennsylvania (coalbed code 36); North Dakota (coalbed codes 1569, 1570); Montana (coalbed codes 1696, 1808, 204); Virginia (coalbed code 344); Alabama (coalbed code 280); Utah (coalbed code 1847); New Mexico (coalbed code 1003); Colorado (coalbed code 1756); West Virginia (coalbed codes 157, 176); Kentucky (coalbed code 151). In some other States where these are major producing beds, the following alternative coalbed names are also used: coalbed code 484 (Kentucky, Kentucky No 11), coalbed code 489 (Indiana, Indiana No 5), coalbed code 36 (Pennsylvania/Ohio, Pittsburgh No. 8), coalbed code 111 (Kentucky, Hazard No 6).

- = No data reported.

\* One mine periodically produces both bituminous and subbituminous coal. When this occurs, it is double counted as a subbituminous and bituminous mine, but is not double counted in the total.

1 For a definition of coal producing regions, see Glossary.

Note: Totals may not equal sum of components because of independent rounding.

- = No data reported.

\* Estimated quantity of coal exported by coal brokers, coal traders and coal terminals reported on the EIA-8A, 'Annual Survey of Coal Stocks and Coal Exports'.

\*\* Excludes mines producing less than 25,000 short tons, which are not required to provide data, and refuse recovery.

1 Open market sales include all coal sold on the open market to other coal companies or consumers; excludes exports.

2 Captive sales transactions include all coal used by the producing company or sold to affiliate or parent companies; excludes exports.

3 State level total and U.S. subtotal include the quantity of coal exported by coal mines only.

4 Adjustments reflect differences in source data. State-level data are sourced from the EIA-7A, 'Annual Survey of Coal Production and Preparation'. Adjustments are estimated using coal consumed for coke production from the EIA-3, 'Quarterly Survey of Industrial, Commercial, &amp; Institutional Users' and metallurgical coal imports from the U.S. Department of Commerce, Bureau of the Census, 'Monthly Report IM 145.' US Total Exports are sourced from U.S. Department of Commerce, Bureau of the Census, 'Monthly Report EM 545.'

Note: Totals may not equal sum of components because of independent rounding.

- = No data reported.

<sup>1</sup> Mines that: 1. produce coal using auger, highwall mine, or punch.

Notes: Productive capacity is the maximum amount of coal that can be produced annually. Capacity utilization is the ratio of total production to annual productive capacity. Excludes refuse recovery and mines producing less than 25,000 short tons, which are not required to provide data. Totals may not equal sum of components because of independent rounding. Mines reporting multiple mining methods are assigned to the mining method with the greatest percentage of production reported.

Sources: U.S. Energy Information Administration Form EIA-7A, 'Annual Survey of Coal Production and Preparation,' for productive capacity, and U.S. Department of Labor, Mine Safety and Health Administration Form 7000-2, 'Quarterly Mines Employment and Coal Production Report,' for annual production.

## Recoverable Reserves

- = No data reported.

NA = Not Available.

s = Value is less than 0.5 of the table metric.

Notes: Recoverable coal reserves at producing mines represent the quantity of coal that can be recovered (i.e. mined) from existing coal reserves at reporting mines. EIA's estimated recoverable reserves include the coal in the demonstrated reserve base considered recoverable after excluding coal estimated to be unavailable due to land use restrictions, and after applying assumed mining recovery rates. This estimate does not include any specific economic feasibility criteria. The effective date for the demonstrated reserve base, as customarily worded, is 'Remaining as of January 1, 2019.' These data are contemporaneous with the Recoverable Reserves at Producing Mines, customarily presented as of the end of the reporting year's mining, that is in this case, December 31, 2018. The demonstrated reserve base includes publicly available data on coal mapped to measured and indicated degrees of accuracy and found at depths and in coalbed thicknesses considered technologically minable at the time of determinations; see Glossary for criteria. All reserve expressions exclude silt, culm, refuse bank, slurry dam, and dredge operations. Reserves at Producing Mines exclude mines producing less than 25,000 short tons, which are not required to provide reserves data.

<sup>1</sup> Mines that: 1. produce coal using auger, highwall mine, or punch.

Notes: Recoverable coal reserves at producing mines represent the quantity of coal that can be recovered (i.e. mined) from existing coal reserves at reporting mines. Excludes mines producing less than 25,000 short tons, which are not required to provide data and refuse recovery. Mines reporting multiple mining methods are assigned to the mining method with the greatest percentage of production reported.

Sources: U.S. Energy Information Administration Form EIA-7A, 'Annual Survey of Coal Production and Preparation,' and U.S. Department of Labor, Mine Safety and Health Administration Form 7000-2, 'Quarterly Mines Employment and Coal Production Report.'

- = No data reported.

1 For a definition of coal producing regions, see the Glossary.

2 Includes all employees at preparation plants and tipples not co-located with a mine.

Notes: Includes all employees engaged in production, preparation, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers. Excludes preparation plants with less than 5,000 employee hours per year, which are not required to provide data.

- = No data reported.

1 For a definition of coal producing regions, see the Glossary.

2 Mining operations that consist of a mine and preparation plant or preparation plant processing both underground and surface coal are reported as two operations.

3 Includes all employees engaged in production, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers.

4 Calculated by dividing total coal production by the total labor hours worked by all employees engaged in production, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers.

Notes: Excludes preparation plants with less than 5,000 employee hours per year, which are not required to provide data.

Sources: U.S. Energy Information Administration Form EIA-7A, 'Annual Survey of Coal Production and Preparation,' and U.S. Department of Labor, Mine Safety and Health Administration Form 7000-2, 'Quarterly Mine Employment and Coal Production Report.'

- = No data reported.

1 For a definition of coal producing regions, see the Glossary.

2 Mines that produce coal using shortwall, scoop loading, hand loading, or other methods.

Notes: For each State, stand alone preparation plant hours are distributed across mining methods by the proportion of underground hours for all stand alone mines. Productivity is calculated by dividing total coal production by the total direct labor hours worked by all employees engaged in production, preparation, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers. Excludes mines producing less than 25,000 short tons of coal and preparation plants with less than 5,000 employee hours during the year, which are not required to provide data.

Sources: U.S. Energy Information Administration Form EIA-7A, 'Annual Survey of Coal Production and Preparation,' and U.S. Department of Labor, Mine Safety and Health Administration Form 7000-2, 'Quarterly Mine Employment and Coal Production Report.'

- = No data reported.

s = Value is less than 0.5 of the table metric.

1 For a definition of coal producing regions, see the Glossary.

2 Mines that: 1. produce coal using auger, highwall mine, or punch.

Notes: For each State, stand alone preparation plant hours are distributed across mining methods by the proportion of surface hours for all stand alone mines. Productivity is calculated by dividing total coal production by the total direct labor hours worked by all employees engaged in production, preparation, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers. Excludes mines producing less than 25,000 short tons of coal and preparation plants with less than 5,000 employee hours during the year, which are not required to provide data.

Sources: U.S. Energy Information Administration Form EIA-7A, 'Annual Survey of Coal Production and Preparation,' and U.S. Department of Labor, Mine Safety and Health Administration Form 7000-2, 'Quarterly Mine Employment and Coal Production Report.'

1 For a definition of coal producing regions, see the Glossary.

Notes: Productivity is calculated by dividing total coal production by the total direct labor hours worked by all employees engaged in production, preparation, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers. Excludes mines producing less than 25,000 short tons of coal and preparation plants with less than 5,000 employee hours during the year, which are not required to provide data.

Sources: U.S. Energy Information Administration Form EIA-7A, 'Annual Survey of Coal Production and Preparation,' and U.S. Department of Labor, Mine Safety and Health Administration Form 7000-2, 'Quarterly Mine Employment and Coal Production Report.'

1 Open market includes coal sold on the open market to other coal companies or consumers; excludes exports.

2 Captive includes all coal used by the producing company or sold to affiliated or parent companies; excludes exports.

3 Excludes price of coal exported by coal brokers, coal traders and coal terminals.

Notes: An average sales price is calculated by dividing the total free on board (f.o.b) rail/barge value of the coal sold by the total coal sold. Excludes mines producing less than 25,000 short tons, which are not required to provide data. Excludes silt, culm, refuse bank, slurry dam, and dredge operations. Totals may not equal sum of components because of independent rounding.

- = No data reported.

w = Data withheld to avoid disclosure.

s = Value is less than 0.5 of the table metric, but value is included in any associated total.

<sup>1</sup> The electric power sector (electric utilities and independent power producers) comprises electricity-only and combined-heat-and-power(CHP) plants whose primary business is to sell electricity, or electricity and heat, to the public (i.e. NAICS 22 plants).

Sources: U.S. Energy Information Administration Form EIA-923, 'Power Plant Operations Report,' and Form EIA-3, 'Quarterly Survey of Non-Electric Sector Coal Data.' Prior to third quarter 2014, coke plant data was collected under Form EIA-5, 'Quarterly Coal Consumption and Quality Report - Coke Plants.'

NA=Not Available.

- =No data reported.

<sup>1</sup> Through 1999, includes Luxembourg.

<sup>2</sup> Through 1990, data for Germany are for the former West Germany only. Beginning in 1991, data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

<sup>3</sup> See source publications for data for countries included in 'Other'.

Note: Totals may not equal sum of components due to independent rounding.
